

Together, We Bring Integrity to the Table

Earn trust and loyalty by empowering your members as they make one of the highest stake decisions in life – the selection of their surgeon.

When it comes to healthcare, nobody should fly blind.

While other industries regularly use data to guide their decisions, the healthcare sector has yet to fully leverage available patient outcome and cost data to measure surgical performance. As an insurer, if you cannot **measure** how surgeon practices impact patient outcomes and downstream healthcare costs, then **you and your members** are flying blind with no way to systematically drive improvements.

Now more than ever...

Healthcare costs have reached an all-time high and are unsustainable. The fastest growing segment of our population is 65 and older. Surgical services are expected to increase significantly (14%–47%) by the year 2020. Payers can no longer perpetuate a system where mediocrity and excellence are rewarded similarly.

Change is necessary.

With SurgeonCheck, improve patient outcomes, minimize downstream healthcare costs, and be more competitive in the marketplace. Closing the gap on surgical performance variations is **not only the right thing to do, it's the smart thing to do.**

SurgeonCheck turns your data into an objective observer of surgical performance.

SurgeonCheck is an expert analytics platform that leverages your in-house data to analyze surgeon performance. Our analysis is risk-adjusted and we utilize literature-based, procedure-specific quality metrics.

Differentiate your service offerings:

Your ability to offer valuable, differentiated services to current and prospective members will enhance your member retention strategy and allow you to compete more effectively for market share. With SurgeonCheck insights, you demonstrate your ability to be a strategic partner to your members by improving patient outcomes and controlling healthcare costs.

Improve your network referral capability:

With SurgeonCheck, empower your primary care physicians to make referrals based on data insights rather than relationships.

SurgeonCheck Highlights:

Surgeon quality scoring by procedure and facility:

Evaluates surgeon performance against peer-reviewed metrics to derive correlations between downstream cost and quality. Evaluations are risk-adjusted for patient severity of illness.

Accurate cost analysis:

Identifies variations in downstream costs based on surgeon performance.

Immediate and intuitive access:

Using an intuitive interface, SurgeonCheck provides actionable surgical performance insights on cost and quality from existing insurance company data systems – no more waiting for days for ad hoc reports.

Secure, cloud-based system:

Leverages leading database and cloud technologies to provide secure information access and data upload capabilities with no software to install.

Rapid ROI:

Unlike major medical system implementations or data warehousing projects, SurgeonCheck's quality improvement and downstream cost reduction initiatives can be implemented quickly with minimal impact to IT and other insurance departments.
